

POPULATION : TEXAS

COMPOSITION AND CHARACTERISTICS OF THE POPULATION

Prepared under the supervision of WM. C. HUNT, Chief Statistician for Population

The first population bulletin for Texas gave the number of inhabitants by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural. The present bulletin deals with the composition and characteristics of the population. The two bulletins cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this second bulletin consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of cities of more than 50,000.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Texas, 3,204,848, or 82.2 per cent, are whites, and 690,049, or 17.7 per cent, negroes. The corresponding percentages in 1900 were 79.6 and 20.4, respectively. Twenty-eight of the 245 counties report no negroes; in 137 other counties the percentage of negroes is less than 12.5; in 30 it is between 12.5 and 25; in 42, between 25 and 50, and in 8 the proportion exceeds one-half. (See map on page 65.)

Native whites of native parentage constitute 66.8 per cent of the total population of the state, and 81.2 per cent of the white population. Native whites of foreign or mixed parentage constitute only 9.3 per cent of the total population, and foreign-born whites only 6.2 per cent.

Of the urban population, 59.5 per cent are native whites of native parentage; of the rural, 69.1 per cent. The corresponding proportions for native whites of foreign or mixed parentage, are 12.2 and 8.4 per cent, respectively. The percentage of foreign-born whites is 9.2 in the urban population and 5.2 in the rural; the percentage of negroes is 19.1 in the urban and 17.3 in the rural.

Sex (Tables 2 and 12).—In the total population of the state there are 2,017,626 males and 1,878,916 females, or 107.4 males to 100 females, the ratio being the same in 1910 as it was in 1900. Among the whites there are 109 males to 100 females; among the negroes the population is about equally divided between the sexes. Among native whites the ratio is 107.3 to 100, as compared with 132.6 to 100 for the foreign-born whites. In the urban population there are 101.7 males to 100 females, and in the rural, 109.3.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—74.7 per cent were born in Texas and 25.3 per cent outside the state; of the native white population, 28.2 per cent were born outside the state, and of the native negro, 12.5 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

POPULATION—TEXAS.

Foreign nationalities (Table 5).—Of the foreign-born white population of Texas, persons born in Mexico represent 51.8 per cent; Germany, 18.7; Austria, 8.6; England, 3.5; Italy, 3; Russia, 2.4; Ireland, 2.2; Sweden, 2; all other countries, 7.7 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Mexico contributed 38.7 per cent; Germany, 28.5; Austria, 8.8; England, 4.4; Ireland, 3.8; Italy, 2.3; Sweden, 1.9; Russia, 1.8; Canada, 1.6 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 1,003,357, representing 25.7 per cent of the population. Of such males, 83.3 per cent are whites and 16.6 per cent negroes. Native whites represent 72.1 per cent of the total number and foreign-born whites 11.2 per cent. Of the 112,152 foreign-born white males of voting age 43,381, or 38.7 per cent, are naturalized. Males of militia age—18 to 44—number 804,980.

Age (Tables 7, 8, and 13).—Of the total population, 13.8 per cent are under 5 years of age, 24.8 per cent from 5 to 14, inclusive, 20.9 per cent from 15 to 24, 25.9 per cent from 25 to 44, and 14.4 per cent 45 and over. The foreign-born white population comprises comparatively few children, only 11.5 per cent of this class being under 15, while 72.4 per cent are 25 years of age and over. Of the native whites of native parentage and of the negroes, only 38.6 per cent are 25 and over. The negro population comprises a somewhat smaller proportion of children under 5 than the native white population of native parentage.

The urban population shows a smaller proportion of children than the rural, and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.7 per cent are from 25 to 44 years of age, inclusive, and of the rural, 23.7 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 1,363,713, of whom 790,736, or 58 per cent, attended school. In addition to these, 6,740 children under 6 and 12,601 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 57.7; for girls, 58.3. For children from 6 to 14 years, inclusive, the percentage attending school was 70.2. The percentage for children of this age among native whites of native parentage was 74.3; among native whites of foreign or mixed parentage, 60.3; among foreign-born whites, 38.4; among negroes, 64.5. (See Table I.) In urban communities the percentage of children of that age attending school was 74.3, and in rural, 69.2.

Illiteracy (Table 10).—There are 282,904 illiterates in the state, representing 9.9 per cent of the total population 10 years of age and over, as compared with 14.5 per cent in 1900. The percentage of illiteracy is 30 among foreign-born whites, 24.6 among negroes, and 4.3 among native whites. It is 3.3 for native whites of native parentage, and 11.6 for native whites of foreign or mixed parentage.

For all classes combined, the percentage of illiterates is 7.1 in the urban population and 10.9 in the rural. For each class separately, also, the percentage of illiterates in the rural population greatly exceeds that in the urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 6.7. (See Table I.)

Marital condition (Tables 11 and 14).—In the population 15 years of age and over, 37.2 per cent of the males are single and 26 per cent of the females. The percentage married is 57.2 for males and 62.7 for females; and the percentage widowed 4.6 and 10.2, respectively. The percentages of those reported as divorced, 0.5 and 0.8, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 17.9 per cent of the females from 15 to 19 years of age are married, as compared with 1.9 per cent of the males, and 61 per cent of the females from 20 to 24 years are married, as compared with 31.6 per cent of the males. In the next age group, 25 to 34 years, the difference in the percentages is less marked, and in the age group 35 to 44 it is very slight, while among those 45 and over the percentage married is higher for the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 62.8 for males, 67.5 for females; native whites of native parentage, 57.5 and 64.2, respectively; native whites of foreign or mixed parentage, 49.3 and 57.1; negroes, 57 and 57.8.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, both for males and for females, is higher in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Texas is 779,177, and the total number of families 798,426, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 5, and the average number per family, 4.9.
